Subject: Implications for Proposed Day Treatment School at Pleasant View Elementary School

**Information based on current students and prospective students for the 2016/2017 school year.

Personnel Implications: None

Delivery of Services The maximum number of elementary school students who could be placed into a proposed Day Treatment program at Pleasant View Elementary would be ten students. Student population would change from year to year based on behavioral needs.

Transportation Implications:

Option 1: New Route from all areas

For ACPS to provide transportation for the ten students in the Day Treatment program from their homes to Pleasant View Elementary School would require the allocation of one bus and one bus driver or one large passenger van and driver. This would also require a new transportation route. Bus route with 10 bus stops is approximately 41 miles with a 1:44 minute bus ride one way for the first student who is first picked up.
